

## BASEMENT PROTECTED AGAINST FLOODING WITH WABACK RESIDENTIAL IN OSLO

Location: Oslo, Norway  
Customer: Private homeowner

### PROBLEM:

An Oslo resident was renovating his basement and wanted to ensure that the time and money he had invested wouldn't be wasted in the event of heavy rainfall and surcharged sewers. Flooded basements had been a problem in the nearby area and in order to secure their home against this type of event the homeowner wanted to ensure he had the best protection possible.

WaBack Mini

### SOLUTION:

A WaBack Residential non-return chamber was installed in the basement on the lateral to stop any back flow from entering the basement. WaBack Residential is a closed unit with a non-return valve installed inside to prevent any backflow. The unit can be installed inside the home at the last connection point on the lateral ensuring complete protection.
