We all know someone who has been affected by it. We see it, feel it and experience it. Climate change and rising sea levels are affecting us all. Through the innovation of WaStop Inline Check Valve, we at Wapro have prevented thousands of floods worldwide.

In order to protect against flooding, we have engineered the WaStop inline check valve to ensure the lowest possible opening pressure whilst maintaining the best possible seal against backflow. This, combined with the lowest headloss available, gives the most efficient flow conditions, ensuring the fastest evacuation of water. An essential quality of check valves used to protect people and property. WaStop protects.

**ADVANTAGES OF WASTOP®**

- Easy installation saving on construction & installation costs
- Superior construction materials
- Lowest headloss amongst inline check valves
- Low life cycle cost
- No moving parts - virtually maintenance-free
- Many dimensions 75-1800mm std & non-standard pipes
- Stops liquids, gases, odours, insects and small animals
- Stops backflow effectively even in low flow events

**APPLICATIONS - WASTE WATER, SURFACE WATER, TIDAL AREAS**

We at Wapro know that any solution for flood prevention or odour control needs to function. Simply, effectively. That’s why, when we invented the WaStop inline check valve in 2000, we had one thought in mind. Instant automatic protection. Working on differential pressure the WaStop functions autonomously, without human interaction, without electricity, without constant maintenance. It just works.

To invent the best inline check valve on the market our engineers went one step further. We also thought about the different parts of the process and who would be affected by the design of the valve. With function top of mind our engineers developed a valve that works in stormwater, sewer, odour applications, as well as ensuring to cover the range of sizes of existing pipes to enable retro-fitting with ease. We cover all sizes of pipes, all shapes, from 75mm-1800mm. As standard. Off the shelf in most cases, for fast delivery. We keep stock to ensure the contractor and end user can keep time and costs to a minimum.
WaStop® is designed to provide asset and property owners’ peace of mind. Simply the most reliable, high quality inline check valve on the market.

**BENEFITS OF SUPERIOR CONSTRUCTION**

**HOUSING & SEAL**
- Thin stainless housing
- Perfect function regardless of the existing pipe quality
- Peace of mind knowing the seal is 100% tight
- Low life-cycle cost
- Lower energy costs
- Quick, easy installation

**DOUBLE COLLARS**
- Fast deliveries
- Easy installation for inlet or outlet installation
- Reduces costs by having one product for multiple installations situations
- Helps you meet your budget

**FIXATION MATERIAL**
- Long life expectancy and low life-cycle cost with high quality materials
- Peace of mind - engineered product that exceeds expectations

**MEMBRANE**
- Protection even in low flow events
- Pulsating flow reducing sedimentation up and downstream
- Extremely low headloss
- Low maintenance costs
- Memory membrane - doesn’t sag

**THE VERSATILITY OF WASTOP®**

**INLINE INSTALLATION**

**CHAMBER INSTALLATION**

**OUTLET INSTALLATION**

**FLANGE INSTALLATION**

**WASTOP® PRE-INSTALLED IN AN ACCESS CHAMBER**

The WaStop Access Chamber provides you with peace of mind. Once installed the WaStop Access chamber provides complete protection against backflow in the sewer or combined sewer network. One ingenious product protects your basement or property from flooding caused by an overload or surcharge in the sewer system.
- Easy access from ground level
- Easy to inspect - simply lift manhole cover and pull up the WaStop module
- Delivered complete - inspection chamber and check valve in one
LOW HEAD LOSS IS ESSENTIAL

Comparing head loss data is difficult as the test procedure is rarely presented and there are multiple ways of altering data. However, the test results shown below were conducted in the same facility with the same reference points and are therefore comparable. The test result shows that the WaStop has 65% lower head loss than a competing inline check valve at flow 150l/s. Both valves were tested in the same open air scenario.

![Head loss comparison graph]

THE WIDEST RANGE OF SIZES TO SUIT ALL PIPES

We at Wapro know that there is a wide range of pipes available on the market, and that these pipes aren’t always perfect. To ensure the valve we provide you with fits perfectly and protects 100% we’re engineered the guess work out of it.

Keeping in line with our customer promise of commons sense and simplicity, we have developed a standard range of WaStop from DN75-1800mm. On top of this we have a Superior Fit Seal to ensure there is no leakage between the existing pipe and the WaStop inline check valve. We designed this seal to not only create the perfect fit, but also to ensure quick easy installation. Time is money.

All sizes are available in short versions or with flanges and can be customized to suit your needs. All WaStop standard valves are reversible for inlet or outlet installation and are able to be used vertically as well as horizontally.
WASTOP® STANDARD RANGE DIMENSIONS

Long life-cycle is part of our DNA. It’s part of our values. With this in mind we use the right materials for the right application. Stainless steel AISI 304 (EN1.4301) and AISI 316L (EN1.4404), and PVC/PE, along with a membrane material suited to the application.
